

# Beam Composer

# Beam Composer

Introducing the latest in total laser projector control....  
**Beam Composer software.**

Beam Composer is a full function projector control software for creating astonishing beam effects and choreography right from your lighting console. Unlike other laser control software on the market, Beam Composer was designed by lighting designers, for lighting designers.

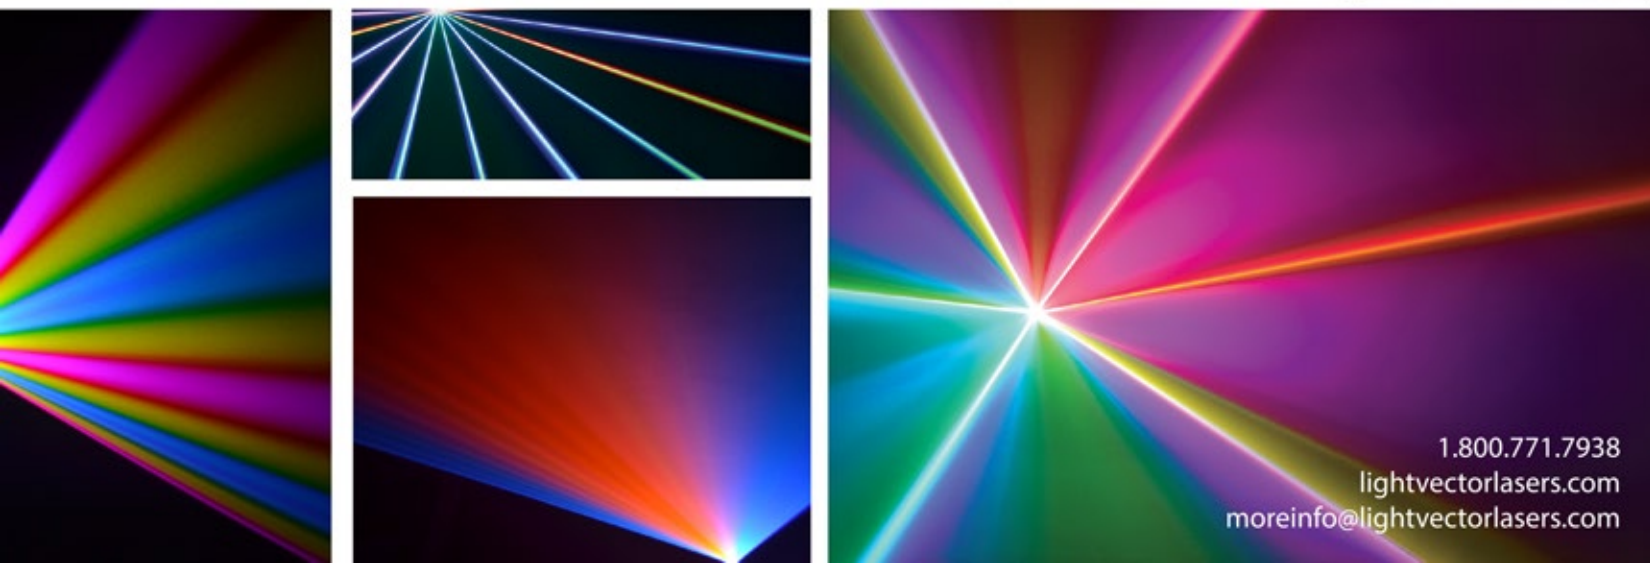

With Beam Composer you can creatively integrate all laser projectors along with other intelligent lights from your console in real time without the need for special laser artwork, frames, or programming.

Beam Composer works with a media server where the laser projector appears to the lighting console as another intelligent fixture or video display device.

The software utilizes a small GUI interface to manage universal laser signal processing attributes, while yielding total creative control to the lighting console.

## System requirements:

Core i7 Processor  
 2GB RAM  
 1GB Hardrive Space  
 Windows 7 Pro

1.800.771.7938
